ADOX Owner & Manager Guide

Oct 14, 2026 · @The Boy From Galle Ltd.

Overview

The ADOX web app runs the whole venue: billing at the counter, reservations, player and membership records, and every money report. This guide covers each screen staff use, how to pull data out, and how to filter it.

Who does what

Role	What they use	How they get in
Manager / counter staff	Admin Console (billing, QR scan, walk-ins), Reservations, Player DB, Members Sign-up, Event Billing	The **admin password**
Owner	Everything above, plus the Owner Dashboard (live figures, price control, promo discount)	The **owner password** at `/owner` (separate from the admin password)
Players	Home page, sign up, log in, their check-in QR code and stats page	Phone number or email + their own password

Opening hours used across the app: 12:00 PM – 9:00 PM.

Currency: all amounts are Sri Lankan Rupees (Rs.).

Every page is reached by typing its address after the site's domain, for example `yoursite.com/admin`. The full list is in the Navigation map below.

Logging in and accounts

Staff pages are protected by a shared password, not a personal account; players have their own accounts.

Staff passwords

Password	Opens	How long it stays unlocked
Admin password	`/admin`, `/users`, `/members`, `/eventbilling`, `/admin/analytics`, `/admin/transaction`, `/revenue`	Until the page is refreshed or closed. Each page asks separately.

Password	Opens	How long it stays unlocked
Admin password	`/reserve`	Remembered on that device until you press **Logout**.
Owner password	`/owner`	Until the browser tab is closed or you press **Lock**.
None	`/report/<player ID>`, `/leaderboard`	Open to anyone with the link.

Both passwords are set by the developer in the hosting settings (Netlify environment variables `VITE_ADMIN_PASSWORD` and `VITE_OWNER_PASSWORD`). To change one, ask the developer to update it and redeploy.

Player accounts

- **Players sign themselves up** at `/signup` with name, age, phone (10 digits), optional email, a password and an avatar.
- **Staff can create an account at the counter** with *Quick Register Player* on the Admin Console. That account gets the temporary password `adoxgaming`.
- **Players log in** at `/login` with their 10-digit phone number (or email) and password.
- **Forced password change:** any account created or reset by staff must choose a new password the next time it opens the home page. The temporary password cannot be reused.
- **Forgotten password:** reset it from the Player DB (`/users`). The password goes back to `adoxgaming` and the player is asked to choose a new one on next login.

Navigation map

The top bar only shows the ADOX logo (it goes back to the home page), so staff pages are opened by typing their address. Bookmark the ones you use daily.

Address	Screen name	Who	What it's for
`/`	Home page	Everyone	Live station status, price calculator, today's bookings, player's QR pass
`/login`	ADOX Portal	Players	Player login
`/signup`	Create Player ID	Players	Player self sign-up

Address	Screen name	Who	What it's for
`/admin`	Admin Console	Manager	Counter billing, QR scan, quick register, walk-ins, live stations, revenue history
`/reserve`	Bookings	Manager	Add and cancel phone-in reservations
`/users`	Player DB (New Sign-ups)	Manager	Find players, filter by join date, export, reset passwords
`/members`	Add Membership	Manager	Sell a 30-day membership
`/eventbilling`	Event Invoicing	Manager	Bill birthdays and private events, print invoice, **edit or void an event invoice**
`/admin/transaction`	Financial Overview	Manager / Owner	Every session payment, filter, **CSV export**, **edit or void a payment**
`/admin/analytics`	Intelligence Dashboard	Manager / Owner	Revenue chart by date, top spenders, custom date range
`/revenue`	Financial Intelligence	Owner	Today / week / lifetime totals, **PDF export**
`/owner`	Owner Dashboard	Owner	Live figures, 14-day chart, **price control**, **promo discount**
`/report/<player ID>`	Player Activity Report	Manager / Owner	One player's last 30 days, **CSV + PDF export**
`/blast`	Gamer Profile	Players	Player's own profile card
`/leaderboard`	Fastest Laps	Everyone	Lap-time leaderboard (Spa – GT3)

Inside the Admin Console, tabs at the top link to **Analytics**, **Members Sign up** and **Player DB**.

Stations, prices and the home page

The venue has 4 stations and one price list; the owner changes prices on `/owner` and every screen updates at once.

Stations

Station	Players at once
Simulator	1
PS5	2
PS4 #1	2
PS4 #2	2

A solo booking still takes the whole station, so nobody else can join it.

Default prices (used until the owner saves different ones)

Item	Price (Rs.)
1 hour, solo	350
1 hour, double	500
30 minutes, solo (flat)	200
30 minutes, double (flat)	300
Single race (Simulator)	100
Quick walk-in, button 1 (15 min)	100
Quick walk-in, button 2 (15 min)	150
Birthday / event estimate, per hour	2,000
Membership, 30 days	1,000

Longer sessions multiply the hourly rate (2 hours solo = Rs. 700). The 30-minute price is a flat rate, not half the hourly rate. The membership fee is fixed in the app; changing it needs the developer.

Discounts

- **Members** get 50% off station bookings while their membership is active.
- **Promo discount** (set by the owner) applies to non-members only. Members always get their 50%; the two never stack.

What customers see on the home page (`/`)

- Open / Closed status and opening hours.

- "Players this week" (shows at least 10+).
- Each station marked **Free** or **Busy till <time>**, with a WhatsApp "Notify Me" link.
- Live sessions with minutes left.
- **Price calculator**: customer picks a date, station, solo/double and 30m/1h/2h, sees the price and any bookings that day, then taps **Book on WhatsApp**. The *Birthday / Event* tab estimates hours × the event rate. These arrive as WhatsApp messages to 077 866 2814; staff then enter the booking on `/reserve`.
- Today's bookings (time and station only, no names).
- Logged-in players also see their profile card and their **Check-in Pass** QR code.

Counter billing and reservations

Every paid session is entered on the Admin Console (`/admin`); phone-in bookings go on `/reserve`.

Admin Console layout

Area	Where	What it does
Quick Register Player	Left column, top	Creates a player account (name, phone, email required; age optional) and loads them for billing. Temporary password: `adoxgaming`.
Quick Walk-In (15 mins)	Left column	Two cash buttons (Rs. 100 / Rs. 150 by default). One tap saves the sale as "Guest Walk-in" and prints a receipt.
Live Stations	Left column	Every running session with a countdown. Turns red at 5 minutes left; a pop-up says "Time's up" when it ends.
QR scanner	Left column, bottom	Scan the player's Check-in Pass to load them. If the camera fails, press **Retry Camera**.
Search Player Phone	Right column, top	Type the phone number exactly as registered and press **Find**.
Billing panel	Right column, after a player is loaded	Station, party size, time, payment.

Area	Where	What it does
Revenue History	Right column, bottom	Takings list with Today / Last 7 Days / This Month / Last 30 Days / All Time filter.

Billing a session, step by step

1. Load the player: scan their QR code, or search their phone number.
2. Playing with a friend? Type the friend's phone in **Add Friend Phone** and press **Add**. Party size switches to Double.
3. Pick a **Station**. Busy stations are greyed out, and so is the Simulator for 2 players.
4. Pick **Solo** or **Double**.
5. Pick the time: **30m**, **1h**, **2h**, **Custom Duration** (type any number of hours), or **Single Race**.
6. Check the total. A red tag shows if a member (50%) or promo discount was applied, with the original price crossed out.
7. Optional: type a lap time or note.
8. Press **CASH** or **CARD**. The sale is saved and the receipt prints.

Bonus minutes owed to a player are added to the session time automatically and shown on the receipt.

Reservations (`/reserve`)

1. Type the customer's phone and press **SEARCH**. A registered player's name fills in; otherwise they are booked as a guest.
2. Fill in name, date, start time, station and hours.
3. Press **CONFIRM BOOKING**. The app blocks a second booking on the same station at the exact same start time.
4. The schedule below the form lists all bookings for the date in the form; change the date to see another day.
5. To cancel, press the red ✕ on the booking and confirm.

Reservations do not charge anything. Bill the customer on the Admin Console when they arrive.

Event billing (`/eventbilling`)

Use this for birthdays, corporate and private events.

1. Enter client or company name, date, from/until times and the agreed total price.

2. Choose Cash, Card or Bank Transfer and add any notes (stations booked, setup).
3. Press **INVOICE & PRINT RECEIPT**.

The right side lists every event invoice ever made, newest first, with the accumulated event revenue.

Correcting a payment

A wrong amount, method, station or duration can be fixed afterwards, and a sale entered by mistake can be voided.

Session payments (Financial Overview, `/admin/transaction`)

1. Find the payment in the list (use the filter buttons to narrow the dates).
2. Press **Edit** on its row.
3. Change the amount, Cash/Card, hours or station, and press **Save changes**. The list then shows the new amount with the old one crossed out underneath.
4. To cancel the sale completely, press **Void payment** instead and type a reason.

Event invoices (Event Invoicing, `/eventbilling`)

1. In the invoice list, press **Edit** to change the amount and payment method, or **Void** to cancel it and give a reason.

Voided payments disappear from every revenue figure but are kept in an archive in the database, with the date and reason, so nothing is lost. Membership payments cannot be edited yet; ask the developer if one needs correcting.

Players and memberships

The Player DB (`/users`) is where you look players up, export them and reset passwords; memberships are sold on `/members`.

Player DB (`/users`)

The page is titled **New Sign-ups** and lists players with:

Column	Meaning
Joined Date	When the account was created
Player Name	Full name and avatar
Phone	Registered phone
Visits in Period	Sessions played inside the chosen date range

Column	Meaning
Total Lifetime Playtime	All hours ever played
Password	**Reset** button

- **Search box:** type part of a name or phone number.
- **Date range dropdown:** All Time, Joined Today, Joined Last 7 Days, Joined This Month, Joined Last 30 Days, Custom Range. This filters by **join date**, not by play date. With Custom Range, pick both a start and end date.
- **Reset password:** press **Reset**, confirm. The password becomes `adoxgaming`; the player must choose a new one at next login. The "Guest Walk-in" row has no Reset button.
- **Export New Users** downloads the list you are looking at (see *Getting data out*).

Selling a membership (`/members`)

1. Type the player's phone number and press **Verify Player**. They must already have an account.
2. Check the name shown.
3. Choose **Cash** or **Online / Card**.
4. Press **Confirm & Activate**.

The membership costs Rs. 1,000 and lasts 30 days from that moment. Selling again to an active member restarts the 30 days from today; it does not add to the remaining days. The payment is recorded as a membership invoice and counts in the Admin Console revenue history and the Owner Dashboard.

When a member is loaded at the counter, the billing panel shows **Active Member Until <date>** or **Membership Expired**, and the 50% applies only while active.

Player Activity Report (`/report/<player ID>`)

A printable report for one player: name, phone, school, sessions and hours in the last 30 days, and a dated log. Nothing in the app links to it yet; open it by typing the address with the player's ID (the `uid` column in the Player DB export, present for players who signed up themselves).

Player-facing pages

- **Gamer Profile** (`/blast`): opened when a player taps their card on the home page. Shows name, hours driven and member status.

- **Leaderboard** (`/leaderboard`): fastest laps for Spa – GT3. Lap times typed in the billing panel are saved on the session receipt only; they do not feed this leaderboard.

Money: reading the revenue screens

Several screens show revenue, and each adds up a different mix of sales, so their totals will not match. Use this table to know what you are looking at.

Screen	Station sessions & walk-ins	Memberships	Events	Navigator event (one-off)
Admin Console – Revenue History (`/admin`)	Yes	Yes	No	Yes
Financial Overview (`/admin/transaction`)	Yes	No	No	Yes
Intelligence Dashboard (`/admin/analytics`)	Yes	No	Yes	Yes
Financial Intelligence (`/revenue`)	Yes	No	No	Yes
Owner Dashboard (`/owner`)	Yes	Yes	No	Yes
Event Invoicing (`/eventbilling`)	No	No	Yes (all time)	No

Full venue revenue for a period = Owner Dashboard figure + event invoices in that period.

Navigator event: the Navigator stall page has been removed, but the money it took is still counted. Its sales show as "Navigator Event" in the lists, charts and CSV export. The stall didn't record cash or card, so its method shows as N/A, it isn't in the cash/card split, and it can't be edited.

A session shared by two players is counted once.

Financial Overview (`/admin/transaction`)

The complete list of session payments, newest first: date and time, player, station, duration, Cash/Card, amount. A green card shows the total and number of transactions for the filter. Filters: **Today**, **Last 7 Days**, **This Month**, **Last 30 Days**, **All Time**. Each row has an **Edit** button for corrections (see *Correcting a payment*). This is the page to export for accounting.

Intelligence Dashboard (`/admin/analytics`)

- **Range dropdown:** Today, Last 7 Days (default), This Month, Last 30 Days, Custom Range, Lifetime.
- **Cards:** Period Revenue (sessions + events + Navigator event), Total Sessions, New Signups (always the last 7 days, whatever range you pick).
- **"Live Players"** at the top = players whose last session started in the past 2 hours.
- **Revenue Performance by Date:** bar chart, one bar per day.
- **Top Spenders:** each player's visits and total paid in the range, highest first. Events show with a briefcase and "(Event)". The search box filters by name.

This page loads players once when opened; refresh it to see new sales.

Financial Intelligence (`/revenue`)

Today's revenue split into cash and card, last 7 days with daily average, lifetime earnings and total hours played, and revenue per hour of machine use. **Export PDF Report** prints the page.

Owner Dashboard figures (`/owner`)

Card	What it counts
Today	Since midnight, with cash and card split (card/cash split is sessions only)
Last 7 days	Today plus the 6 days before, with average per day
This month	Since the 1st, with membership income shown underneath
Lifetime	Everything ever, plus total hours played and the Navigator event total
Sessions today	Number of sessions and hours booked today
Live right now	Stations in use out of 4
Earned per played hour	Lifetime session revenue ÷ lifetime hours
Revenue – last 14 days	Bar chart, one bar per day
This month by station	Revenue per station, with Quick walk-in listed separately

Figures update live; no refresh needed.

Owner controls: prices and promo discount

Only the Owner Dashboard (`/owner`) can change prices and the promo discount; changes go live on the website and the Admin Console immediately.

Changing prices

1. Open `/owner` and enter the owner password.
2. Scroll to **Prices**. Fields are grouped: Stations per hour (solo, double), Stations 30 minutes (solo, double), Simulator & walk-ins (single race, quick walk-in buttons 1 and 2), Events (birthday / event per hour).
3. Type the new amounts. Every price must be above 0.
4. Press **Save prices**. A green message confirms. **Undo changes** discards edits you haven't saved.

Past sessions keep the price they were charged.

Promo discount

1. In **Promo discount**, type a percentage from 1 to 100.
2. Press **Turn on**. The tag shows e.g. "20% ON".
3. Press **Turn off** to end it.

The promo applies to non-member station bookings, custom durations and single races at the counter. It does not apply to quick walk-ins, events or the home-page calculator.

Locking

Press 🔒 **Lock** before leaving a shared computer. Closing the tab also locks it.

Getting data out

Three screens download spreadsheet files (CSV); two print to PDF; everything else can be saved with the browser's print. CSV files open in Excel or Google Sheets.

What you want	Where	Button	File you get	What's in it
All session payments	`/admin/transaction`	📥 **Export All Data**	`Adox_Full_Report_<filter>_<date>.csv`	One row per session for the selected filter: start time, player, station, duration, method, amount, original price, party size, member session, single race, bonus, lap time, quick walk-in

What you want	Where	Button	File you get	What's in it
Player list	`/users`	📥 **Export New Users**	`Adox_New_Signups_<range>.csv`	One row per player shown (range and search applied): join date, name, phone, email, age, membership details, Visits_in_Period, Total_Lifetime_Hours
One player's history	`/report/<player ID>`	📥 **Export All Data (CSV)**	`Report_<Name>.csv`	Player details + every session they ever played (all time, not just 30 days)
One player's report as PDF	`/report/<player ID>`	**Print PDF**	PDF via the print window	Last 30 days summary and log
Revenue summary as PDF	`/revenue`	**Export PDF Report**	PDF via the print window	Today, 7 days, lifetime, per-hour rate

Exporting session payments, step by step

1. Open `/admin/transaction` and enter the admin password.
2. Press the filter you want: Today, Last 7 Days, This Month, Last 30 Days or All Time.
3. Check the total on the green card.
4. Press 📥 **Export All Data**. The file lands in your Downloads folder.
5. Open it in Excel or Google Sheets (*File → Import* in Sheets).

Exporting players, step by step

1. Open `/users` and enter the admin password.
2. Choose a range in the dropdown (or Custom Range and both dates).
3. Optional: type in the search box to narrow it down.
4. Press 📥 **Export New Users**.

Saving a PDF

When a print window opens, set **Destination** to **Save as PDF** and press **Save**. The same works on any screen with **Ctrl + P** (Windows) or **Cmd + P** (Mac), for example the Owner Dashboard or the Analytics page. (On the Admin Console and Event Invoicing pages, printing only prints the last receipt.)

Data with no export button

Membership invoices, event invoices, reservations and the Analytics top-spenders list have no download button. Options:

- Print the screen to PDF as above.

- For a monthly accounting file, the developer can export these from the Firebase console (collections `invoices`, `event_invoices`, `reservations`, `navigator_sessions`), or add export buttons.

Filtering cheat sheet

Every screen now uses the same date rules, so a filter name means the same dates everywhere:

Filter name	Dates it covers
Today	Since midnight
Last 7 Days	Today plus the 6 days before
This Month	Since the 1st of the current calendar month
Last 30 Days	Today plus the 29 days before
All Time / Lifetime	Everything
Custom Range	Start date 00:00 to end date 23:59 (both dates needed)

Where each filter is:

Screen	Filter	Options
Admin Console – Revenue History	Buttons	Today, Last 7 Days, This Month, Last 30 Days, All Time
Financial Overview `/admin/transaction`	Buttons	Same as above. The CSV export follows the selected button.
Intelligence Dashboard `/admin/analytics`	Dropdown	Today, Last 7 Days, This Month, Last 30 Days, Custom Range, Lifetime
Intelligence Dashboard	Search box	Filters Top Spenders by player or client name
Player DB `/users`	Dropdown	All Time, Joined Today, Joined Last 7 Days, Joined This Month, Joined Last 30 Days, Custom Range (by **join date**; "Visits in Period" uses the same range)

Screen	Filter	Options
Player DB	Search box	Part of a name or phone number
Reservations `/reserve`	Date field in the form	Shows that day's bookings
Player Activity Report	None	Screen is always the last 30 days; CSV is all time
Owner Dashboard, `/revenue`	None	Fixed cards: Today, Last 7 Days, This Month, Lifetime
Event Invoicing	None	All event invoices, newest first

The only exception is the Analytics "New Signups" card, which always shows the last 7 days.

Common questions answered by filters

- *How much did we take today in cash vs card?* → Owner Dashboard **Today** card, or `/revenue`.
- *Revenue for a specific date range, e.g. 1–15 October?* → `/admin/analytics`, Custom Range, both dates (sessions + events).
- *Who signed up this month?* → `/users`, Joined This Month.
- *Who are our best customers?* → `/admin/analytics`, Top Spenders, pick a range.
- *All sales this month for the accountant?* → `/admin/transaction`, **This Month**, Export; then add memberships and events separately (Navigator event sales are already in the export).

Troubleshooting and FAQ

Problem	What to do
QR camera says "permission is blocked"	Click the lock icon in the address bar, allow Camera, then press **Retry Camera**.
QR camera says "busy"	Close other tabs or apps using the camera, then **Retry Camera**.
QR camera says it needs HTTPS	Open the live site address (https://…), not a local file.
"QR scanned, but no matching player"	The player's account is missing. Search by phone or Quick Register them.

Problem	What to do
"User not found" on phone search	The number must match exactly as registered (10 digits, e.g. 07XXXXXXXX). Try the Player DB search with part of the name.
A station button is greyed out	Someone is playing on it, or you chose Double on the 1-seat Simulator.
Price buttons don't appear	Pick a station first.
Receipt didn't print	The print window opens automatically; check the receipt printer is selected. The sale is already saved.
Player forgot their password	Player DB → **Reset**. Tell them to log in with `adoxgaming` and choose a new password.
Password reset shows "Not authorised"	The hosting setup for resets needs the developer (server admin key).
"Account already registered" at sign-up	That phone or email already has an account; log in or reset the password.
Revenue totals don't match between screens	Expected; see the table in *Money: reading the revenue screens*.
Analytics doesn't show a sale just made	Refresh the page.
Billed the wrong amount or station	Use Edit or Void on /admin/transaction (sessions) or /eventbilling (events). See Correcting a payment.
Need to change the admin or owner password	Ask the developer to update it in the Netlify settings and redeploy.
Need to change the membership fee (Rs. 1,000) or length (30 days)	Developer change; not in the Owner Dashboard.

Good habits

- Lock the Owner Dashboard and log out of `/reserve` on shared computers.
- Bill every session on the Admin Console, even regulars, so reports stay complete.
- Take a monthly CSV from `/admin/transaction` and `/users` and keep it with your accounts.
